

Quality Policy

Infodas is one of the leading software and consulting companies for information security in Germany. The company focuses on cyber security and IT in the public sector as well as the protection of critical infrastructures.

In order to meet the changing and growing expectations of customers, it is essential that infodas develops reliable, high-quality and mature products and provides sophisticated services with the same care.

We at infodas are convinced that in the IT security sector only those companies will have sustainable economic success that enter the market with quality products and services.

At infodas, quality is not only understood as a measurable and evaluable characteristic of the products, but also refers in particular to working methods and techniques in consulting, product development, customer and project management. In addition to customer requirements, quality is derived from legal requirements, norms and standards as well as the state of the art.

infodas will continuously develop and improve the quality management system established according to the ISO9001 standard.
